**Notes:**

The numbers of parishes with 'high' IMD scores are those parishes with an Index of Multiple Deprivation 2004 score greater than 45.23 and with a population, as determined by 2001 Census data approximated to parishes, greater than zero. The populations for these 'high' IMD parishes are those as determined by 2001 Census data approximated to parishes. The IMD score of 45.23 has been chosen as government lower level Super Output Areas with scores of this or more comprise the most deprived 10% of the country.

IMD scores for Church of England parishes were calculated from The Index of Multiple Deprivation 2004 released by the Office of the Deputy Prime Minister in 2004. Further details of the index are available from [www.odpm.gov.uk](http://www.odpm.gov.uk)  
The lower level SOAs are areas of 1,000 to 3,000 people created by the Office for National Statistics as a stable geography for the release of Census and other official statistics

- means not available. IMD scores are not available for the Channel Isles (annexed to the Diocese of Winchester) or the Diocese of Sodor and Man as the islands are not included in UK government deprivation or Census statistics.
